Re: Profiler Patch v3.2.10

This file is a downloadable patch for the *Crop Revenue Profiler*[®] (v3.2.4 through v3.2.8) software program. **This patch is recommended for all Profiler Users using Version 3.2.4 or higher.** The purpose of this patch is to upgrade users to v3.2.10. The installation is simple and only requires a few seconds on most machines. The primary purpose of the patch is to correct a marketing screen anomaly in the input wizard, corrects the retrieval of the MPC/CAT RMA price election from the maintenance screen and modifies the installation protocol on Windows 2000 for more efficient operation.

Installation:

The patch is used after installing the Profiler v3.2.4. Do not use this patch if you are using a version prior to v3.2.4. (To verify your version, start the Profiler and look in the lower left-hand corner above the start button for the version number.) To install the patch, first download the program from the link provided on this website, saving the file to your desktop or to a hard drive location you can access. Close all open programs including the *Crop Revenue Profiler*[®] program. Locate the file you saved which is named: "CRPUpdate1". The patch will automatically load when you double click on the file. After running the patch, start the *Crop Revenue Profiler*[®] program and verify that the patch was installed successfully by confirming that you are using version 3.2.10. (To verify your version, start the Profiler and look in the lower left-hand corner above the start button for the version number.)
